

Final Review Part 2
CH 7— Probability

Name: _____ Period: _____

1. If you flip a coin twice and then roll a die, how many possible outcomes are there?
2. If you flip a coin five times in a row, how many possible outcomes will there be?
3. A die is tossed. What is the probability of tossing a 2 given that the number tossed was an even number?
4. Two dice are rolled. What is the probability of both of the dice being the same number?
5. If you toss a pair of dice, what is the probability that the sum of the two numbers will be *more than* 9?
6. If the probability of an event is $\frac{3}{8}$, what is the probability that this event won't occur?
7. If the probability of an event occurring is $\frac{1}{8}$, what are the **odds** that it won't happen?
8. If the odds of an event are 9:20, find the **probability** the event occurs.

A bag contains 30 marbles with 3 white, 15 blue and 12 green ones.

9. If you reach into the bag and draw out marbles one at a time until you have three in your hand, what is the probability that they are all blue?
10. If you reach into the bag and draw out one marble at a time and record the color before *replacing it* to draw the next marble. What is the probability that they are all blue if you draw three marbles?

20. A bag contains four red balls, seven white balls and eight blue balls. If three balls are selected at random, with replacement, find the probability that they are all red.

21. At a car rental agency, the agent has 10 identical midsize cars on his lot and six people have reserved midsize cars. In how many different ways can the six cars to be used be selected?

Review CH 8 — Statistics

1. Find the standard deviation for the data: 7, 2, 9, 3, 10, 6

$$s = \sqrt{\frac{\sum(x - \bar{x})^2}{n-1}} \quad z = \frac{x - \bar{x}}{s}$$

\bar{x} = _____

s = _____

2. The scores from all of the statistics test were normally distributed with a mean of 76 and a standard deviation of 8.

a) What would your z-score be if you scored an 86 on the test?

b) What would your z-score be if you scored a 66 on the test?

c) What would your test score be if you had a z-score of 2.1?

d) What would your test score be if you had a z-score of -1.8?

3. Find the 7 missing numbers that have: Mean = 110, Median = 100, Mode = 50 and Range = 150
Support your work by showing how your numbers meet the criteria.
